Re: FY2019 Offender Profile

Please find attached a copy of the FY2019 Offender Profile. The Offender Profile is a collection of important statistics about the offender population of the Missouri Department of Corrections.

The work of the department is ever-challenging and the purpose of the statistical abstract is to answer many of the questions that the public, the legislature and the department's own staff often ask about the offenders supervised by the department. In FY2019 the department admitted nearly 17,000 offenders to prison and over 43,000 offenders began a new probation or parole assignment. Every day the department supervises approximately 90,000 offenders.

In FY17 the Justice Center of the Council for State Government assisted the department in a Justice Reinvestment initiative in Missouri involving many stakeholders in the criminal justice system and the legislature. The initiative is continuing and will lead to more effective investments in assessment and programs to reduce recidivism and deal with the increasing female offender population. Many of these changes will be reflected in future years' reports.

I hope you find the Offender Profile useful. Comments or suggestions are always appreciated.

1. Trends

DOC Population and Trends FY2010 to FY2019

At the end of FY2019, Missouri Department of Corrections (DOC) supervised a total of 89,584 offenders, a decrease of 596 individuals from FY2018 (a net change of -0.7%). The field population increased by 2,855 offenders from the prior year (Table 1.1). The male offender population decreased by 1.3% compared to FY2018. Meanwhile, the total female offender population increased by 1.8% despite the decrease in incarcerations. In review of the last ten-year, male and female trends follow similar trajectories. (Fig. 1.1).

Figure 1.1. Trends in Total and Gender-specific Missouri DOC Offender Population, by Fiscal Year, FY2010 to FY2019 (Female data are displayed on secondary [right-hand] axis with a different scale.)

Incarcerated Population FY2010 to FY2019

The total incarcerated population is 28,246 offenders in FY2019 which is a decrease of 3,451 offenders from the prior fiscal year. This decrease in institutional population results in a 2,970-bed surplus. From FY2013 to FY2017, an operating bed shortage existed. In FY2015, the department's conversion of the Community Release Center in Kansas City to a mainline prison eased the shortage. Up until FY18, the needs of the increasing population have been met with saturation housing. In looking at the 10-year trend, from FY2009 to FY2016 both the male and female populations increase with the female population rising faster than the male; however, FY2018 and FY2019 show population decreases (Fig. 1.2 and Table 1.2).

Supervised Population FY2010 to FY2019

Since September 1, 2012 offenders on probation and parole can earn compliance credits by maintaining good behavior and, thereby, reducing the time to discharge of their sentence (HB1525). As a result, the supervised population declines from 73,555 offenders in FY2012 to 61,338 in FY2019--a decrease of over 12,000 supervised offenders (Table 1.3). Unlike the previous past five years, for FY2018 and FY2019, increases occur in both parolee and probationer populations (5% overall in FY2019). The female supervised population increases more than in the male supervised population (4.5% vs 6.1%, respectively) (Table 1.3). The ten-year trends, in the male and female supervised populations, are similar (Fig. 1.3).

Incarceration Rates and US Comparison

Incarceration rates are a common measure used to compare prison populations among various jurisdictions. Incarceration rate is calculated by determining the number of incarcerated offenders per 100,000 individuals of the general population within the same jurisdiction. These measures are usually by calendar year and may be for the prior year to maintain compatibility with national and state corrections reporting and US Census Bureau estimates.

For 2016, Missouri's total incarceration rate is above the total U.S. incarceration rate. This is true of both white and black offenders as well. The Missouri incarceration rate of Hispanic offenders, however, is only 60% of the U.S. incarceration rate (Table 1.4).

Table 1.4. Missouri general population, incarcerated population and incarceration rate by race/ethnicity for 2016 (United States incarceration rates shown for comparison.)

	Race				Total ^{††}
	White ⁺	Black ⁺	Hispanic	Other	
Missouri Population for July 1, 2016 [*]	4,974,623	716,382	165,595	236,400	6,093,000

^{††}Includes American Indians, Alaska Natives, Asians, Native Hawaiians, other Pacific Islanders and persons identifying two or more races

⁺Excludes persons of Hispanic or Latino origin

Missouri's incarceration rate has shown an increase in every year since 2007 whereas nationally, the incarceration rate has been declining. From 2007 to 2016 Missouri's incarceration rate increased by 5.3% compared to a decrease of 11.1% in the national rate. (Table 1.5). As a result of the increasing incarceration rate Missouri's ranking increased from 12th in 2008 to 8th in 2016.

BJS CSTAT Tool Quick Tables

Missouri's female incarceration rate has also been higher than the average of all states for each year in the ten-year span (Table 1.5). The female incarceration rate, on average, has slowly declined for all states while Missouri has experienced an increase since 2010 (Fig. 1.6). Over the past ten years, the female population has increased 32.5% in our state (Table 1.7). When looking at female incarceration rates by state, Missouri now returns to fifth (to the 2014 level) (Table 1.7.). This reflects expanding incarcerated female populations in South Dakota.

The incarceration rate for males increased 1.0% from 2015 to 2016 and now ranks 9th – down from 8th in 2015. This reflects an increasing incarceration rate for males in Georgia. Over a ten-year period from 2007 to 2016, the incarcerated population has increased more than 6% which is a much slower increase than the female population.

Figure 1.6. Ten year trends in female incarceration rates for Missouri and all fifty states combined from 2007 to 2016

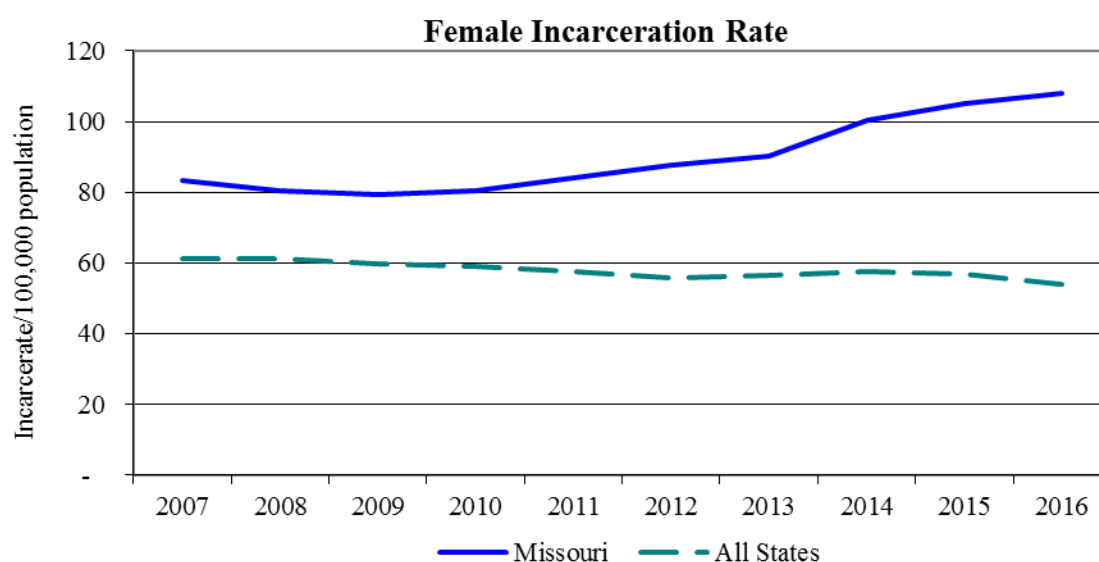

Table 1.7. Female incarcerated population and incarceration rate by state for 2014 and 2015, ranked in order of incarceration rate (Change from 2014 to 2015 includes the change in number of offenders and percent change.)

BJS CSTAT Tool Quick Tables

Incarceration Rates and Felony Sentencing Rates in Missouri

Incarceration and felony sentencing rates are calculated using both the offender population and general population. Incarceration rates are calculated using the number of offenders incarcerated for a felony offense on a particular day. This measure includes offenders revoked from probation or parole and is often influenced by the time offenders are incarcerated.

Felony sentencing rates are calculated using the number of offenders sentenced to probation or prison for a new felony offense in a year. Both measures are reported as the number of offenders per 100,000 of the general population for the jurisdiction. It is important to recognize this distinction since a county may have a high sentencing rate but relatively low incarceration rate due to a high number of probation sentences.

Table 1.9. Incarcerated Population, Incarceration Rate and General Population by Missouri Counties as of June 30, 2019 (Ranking is based on incarceration rate.)

Incarceration Rate by Sentencing County, June 30, 2019

Missouri Counties Felony Sentencing Rate FY2019

2. Institutional Population

Demographics

The incarcerated female and male populations differ in racial/ethnic composition. On June 30, 2019, black offenders represent a lower percent in the female institutional population (14.4 %) than in the male institutional population (36.1 %). The reverse is true of white offenders; white offenders represent a greater proportion in the female population (81.3 %) than in the male population (61.3 %). All other racial and ethnic groups account for less than 5% of both male and female populations (Table 2.1).

Table 2.1. Institutional Population by Gender and Race/Ethnicity on June 30, 2019

Race/Ethnicity	Count			Percent		
	Female	Male	Total	Female	Male	Total
Asian	8	54	62	0.3%	0.2%	0.2%
Black	389	9,202	9,591	14.4%	36.1%	34.0%
Hispanic*	85	501	586	3.1%	2.0%	2.1%
Native American	22	70	92	0.8%	0.3%	0.3%
Unknown	-	36	36	0.0%	0.1%	0.1%
White	2,196	15,609	17,805	81.3%	61.3%	63.2%
Total	2,700	25,472	28,172	100.0%	100.0%	100.0%

* Offenders identifying themselves as having a Hispanic ethnicity have been counted in the Hispanic race category

Commitment age is the age on admission to an institution in a new commitment cycle. As seen in Table 2.2, ninety percent of the total incarcerated population enters a DOC correctional facility between 18 to 49 years of age. The most common age at prison commitment is 20 to 24 years for males (21.7% of all males) and between 25 to 29 years for females (23.2% of all females). Offenders, less than 20 years old at the time of commitment, account for 9.1 % of the incarcerated population. Persons committed at age 60 or older represent 1.6% of the population.

Table 2.3 displays current age data of incarcerated offenders. Eighty percent of the total incarcerated population in DOC correctional facility are between 18 to 49 years of age. The current population age trends reflect the aging of the most prominent cohorts of the commitment age. For the end of FY2019, the largest percent of offenders is between 20-24 years (20.7 %) followed closely by the 25-29 years age group (17.9 %); offenders less than 35 years old represent 63% of the incarcerated population. As with commitment age, the most common age range for current age differs by gender: for female offenders, 25-29 years (22.1% of all females); for males, 20-24 years (21.2% of all males). Male offenders are represented nearly equally in the 20-24 years and 25-29 years age groups with the combined groups accounting for one-third (38.6%) of the male population. Overall, the male and female populations show similar age distributions (Fig. 2.1)

Table 2.2. Institutional Population by Commitment Age, June 30, 2019

Figure 2.1. Age Group Distribution of Incarcerated Offenders on June 30, 2019

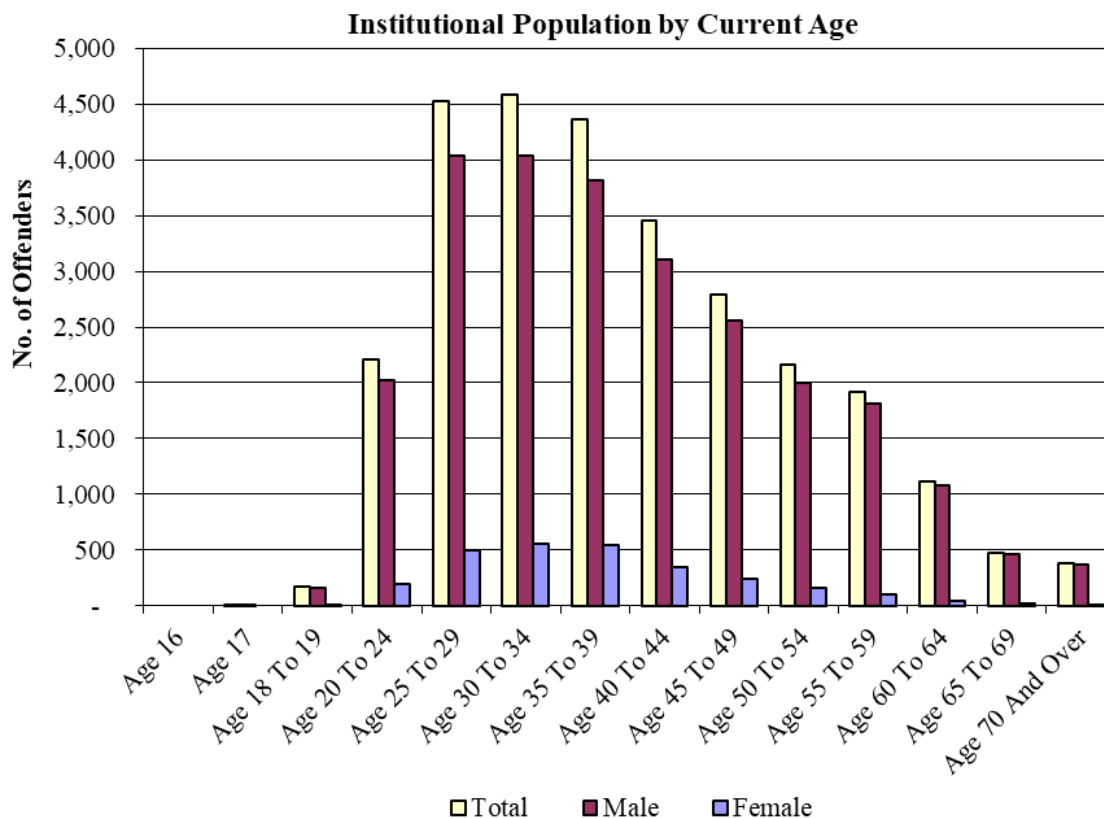

Table 2.4 reports the aging offender population (age 50 years and older) steadily increasing since FY2010; however, the rate of increase remains low at around 4% per year over the ten-year span. The aging male offenders make up 22.5% of the population in FY2019 and the average age increases by 0.6 years per annum since FY2010. While the numbers in the aging female population continue to increase, the average age remains consistently near 37.3 years from FY2010 to FY2019.

Offender Classification

Assessments are conducted on admission and during incarceration to classify an offender's health needs or skill levels. Some offenders may be 'unclassified' which includes recently admitted offenders who have not completed the classification process and offenders sentenced to 120-day programs. Statutory requirement states offenders admitted under a 120-day program are released within 120 days of admission if they successfully complete the program. Therefore, 120-day offenders do not receive a full classification upon admission due to the expected short prison stay.

The next four tables report offender classification levels as of June 30, 2019. A high school diploma/high school equivalency (HSD/HSE) education level is achieved by 10.9% percent of offenders and 74% of offenders achieve a semi-skilled or greater vocational classification. Education levels are similar for male and females. However, women have higher levels of vocational readiness; 60% of females are either 'skilled' or 'trained and skilled' whereas only 44% of males obtain these classifications. A majority of the offender population (53 %) has no medical problems. Male and females utilize routine sick calls almost equally. Females are 2½ times more likely to require 24-hr nursing care than males (6.5% vs. 3.5%, respectively). Seventy-one percent of offenders have no or mild mental health problems. Females require more mental health services. The percentage of females needing clinic care or medication for mental health problems is nearly three times that of males. See Table 2.5.

Offenders assessed with a low custody level may have this assessment overridden for reasons of poor institutional adjustment, charges pending, and, in the case of sex offenders, failure to complete the Missouri Sex Offender Program (MOSOP). The lowest percent of offenders are in Level III (high risk) custody for both males and females. However, males are more evenly distributed among the custody levels, while just over half of females are classified as Level I (low risk) custody (Table 2.6).

In 2003, DOC introduced the substance abuse screening instrument, Screening for Alcohol and Chemical Abuse (SACA). SACA classifies offenders on a scale from 1 to 5, where a score of "1" indicates no substance abuse or substance dependence while a "5" indicates a severe substance abuse or dependence problem. Most assessments are completed on admission to prison and at the start of field supervision (probation or parole). Most offenders (90%) require substance abuse education or treatment; the greatest proportion requires intermediate (six months) treatment (36 %). This group accounts for 35% of male offenders and nearly half of all female offenders (Table 2.7).

Offense Groups and Demographics

The most serious crime charged to an incarcerated offender determines his/her offense group classification. The frequency of an offense group varies by gender. Among male offenders incarcerated at the end of FY2019, the greatest numbers are sentenced for violent offenses (42 %) followed by nonviolent offenses (21 %). The most numerous offenses for females are drug offenses (35 %) followed by nonviolent offenses (31%) See Table 3.3. Average sentences are longer for males than females in all offense categories with an overall average of 4.5 years longer for men than women (Table 3.4).

Table 3.3. Incarcerations by Offense Group, June 30, 2019

Offense Group*	Count			Percent		
	Female	Male	Total	Female	Male	Total
Violent	758	10,705	11,463	28.1%	42.0%	40.7%
Sex and Child Abuse	156	4,751	4,907	5.8%	18.7%	17.4%
Nonviolent	760	5,303	6,063	28.1%	20.8%	21.5%
Drug	956	3,979	4,935	35.4%	15.6%	17.5%
DWI	70	734	804	2.6%	2.9%	2.9%
Total	2,700	25,472	28,172	100.0%	100.0%	100.0%

Table 3.4. Average Sentences by Offense Group for Offenders Incarcerated on June 30, 2019.

Offense Group*	Average Sentence (yrs)		
	Female	Male	Total
Violent	15.0	18.0	17.8
Sex and Child Abuse	11.2	18.1	17.9
Nonviolent	6.7	7.8	7.7
Drug	7.2	8.9	8.5
DWI	6.6	7.5	7.4
Total	9.5	14.2	13.7

* Violent offenses include homicide, robbery, assault, kidnapping, arson 1st, armed criminal action and serious weapons offenses (felony class A or B). Sex offenses include RSMo 566 sex offenses and RSMo 568 child abuse offenses, excluding non-support. Drug offenses include RSMo 195 and 579 offenses. DWI includes Blood Alcohol Content (BAC) offenses. Nonviolent offenses are other offenses including property offenses, public order offenses, other weapons offenses and other traffic offenses. Life sentences are computed at 30 years.

The data on felony classes in Tables 3.5 and 3.6 reflect the changes on January 1, 2017 to the Missouri's criminal code. The revised criminal code has the addition of a class E felony. This new code also introduces a new class C and reclassified class C and D felonies to class D and E respectively.

The data are a mixture of old and new code classifications. More offenders, both male and female, are sentenced with D class felonies (10% of males; 17% of females). Almost half of all males are charged with class A or B felonies. Males have nearly double the percent of class A felonies as females (28% vs 15% respectively). Males also have a lengthier average sentence for all felony classes than females with the greater differences observable in class A, B, and unclassified felonies (Table 3.6). For all offenders serving life sentences, nearly 40% are without parole. This percentage is the same for both sexes (Table 3.7). For life sentences by racial/ethnic groups, 17% of white and 22% of black offenders have sentences without parole (Table 3.8).

Table 3.5. Incarceration by Felony Class, June 30, 2019

Felony Class	Count			Percent		
	Female	Male	Total	Female	Male	Total
A	409	7,010	7,419	15.1%	27.5%	26.3%

** Life without Parole includes offenders sentenced to 50-year incarceration for Capital Murder.

Top Twenty Offenses

The next five tables contain data on the top twenty offenses in the incarcerated population. The top twenty offenses account for 66% of the most serious crimes committed by offenders when tallied on June 30, 2019 (Table 3.9). Felony possession of illicit drugs ranks first at 8% of all offenses. The top twenty female offenses contain 68% of all female offenders with the two most numerous offenses being drug related (Table 3.10). Males exhibit a wider range of offenses (than females) with only 66% of offenders accounted for in the top twenty offenses (Table 3.11). The top twenty offenses among male offenders contain more personal assault offenses compared with female offenders. Top twenty offenses are similar among racial/ethnic groups; however, disparities exist in the frequency of offenses (Tables 3.12 and 3.13). Drug offenses occur more frequently in the white and other races/ethnicities incarcerated population while robbery and homicide offenses rank higher among the black incarcerated population.

Table 3.9. Top Twenty Offenses for Total Incarcerated Population, June 30, 2019.

Dangerous Felony Offenses

The percent of incarcerated offenders with dangerous felon classification reveals an increase from 16.4% in FY2010 to 21.4% in FY2019 (Table 3.14). Robbery 1st degree remains the most frequent charge among dangerous felonies. It is important to note that Murder 1st degree is not classified as a dangerous felony but instead is a separate offense with a penalty of capital punishment or life without parole (Chapter 10.).

The number of offenders with life sentences rises steadily from FY2010 to FY2018 but a inconsequential decrease occurs in FY2019 (Table 3.15). However, their percentage of the total incarcerated population hovers around 9%.

4. Comparison with the Institutional Population of June 30, 2014

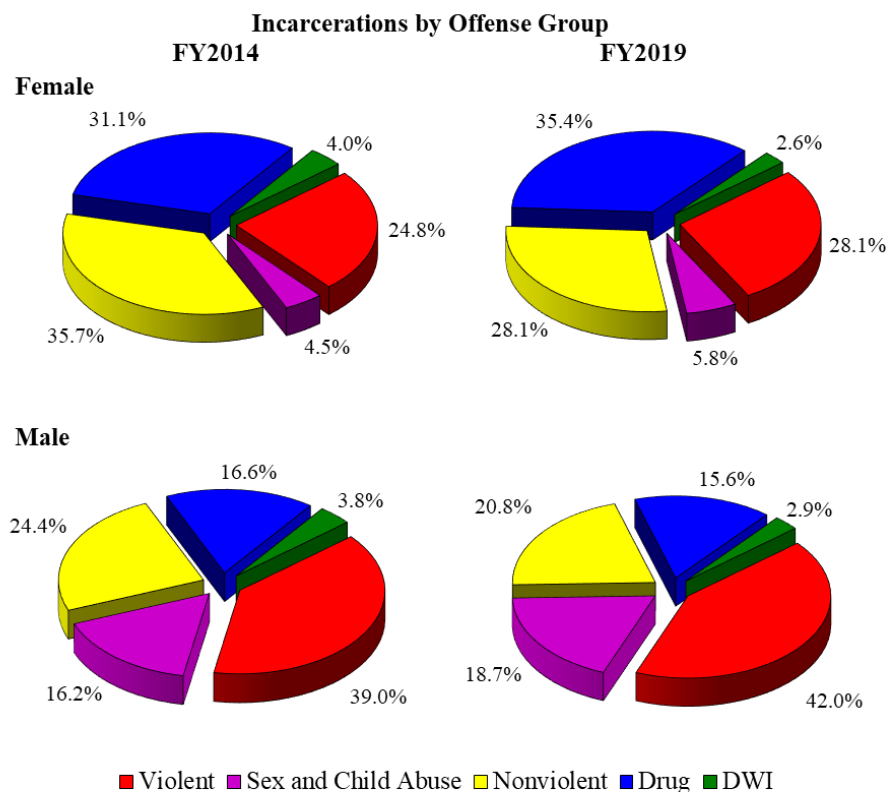

Offense Groups

From FY2014 to FY2019, the female incarcerated population decreases by 9% while the male population decreases 12% (Table 4.1). The largest increase in offense groups, for female, occurs in sex and child abuse-related offenses (16% increase) which represent 6% of all offenses among the female population in FY2019. For males, the largest increase among offense groups is also in sex and child abuse-related offenses (1.5%). Male offenders are more likely than females to be sentenced for violent and sex and child abuse offenses (Fig. 4.1). Both male and female offenders have a decrease in number and percent of DWI (driving while intoxicated) and nonviolent offenses when comparing FY2014 to FY2019.

Table 4.1. Five-year Comparison of Institutional Population by Offense Group, FY2014 and FY2019 Cohort

Figure 4.1. Percent of Offenses in each Offense Group for Male and Female Offenders on June 30, 2014 and 2019

Average Sentences

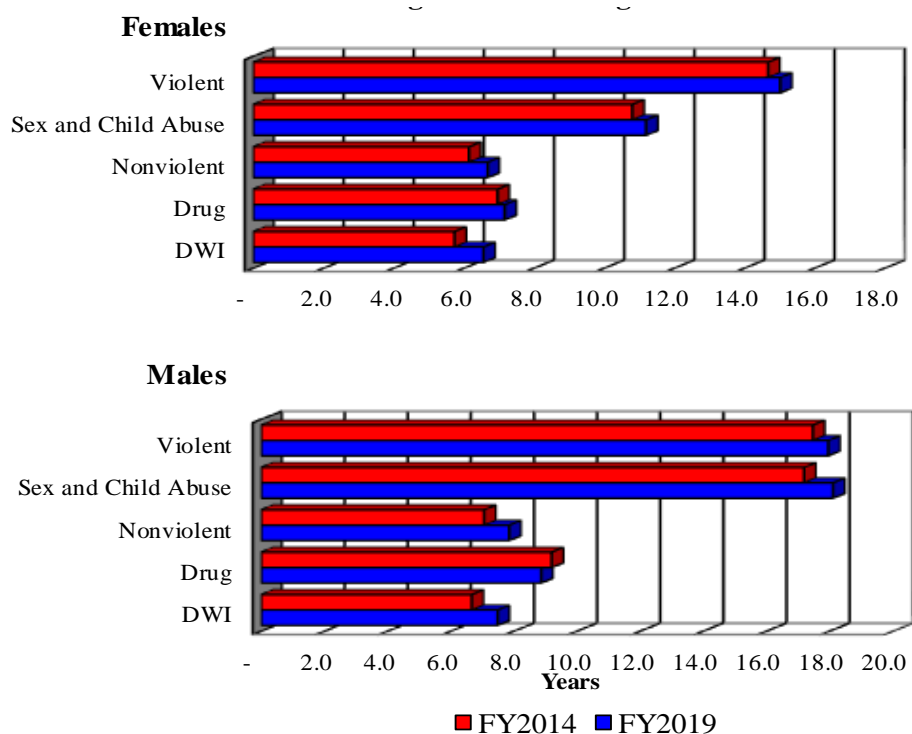

The average aggregate sentence length for all incarcerated offenders has a total change of 8% from FY2014 to FY2019; average sentence length for females increases 8.6% while the average sentence length for males increases 8.1% (Table 4.2). The largest percentage increase in average sentence length is for DWI for both genders. For offenders incarcerated on June 30, 2019, female offenders are serving an average sentence of 9.5 years while male offenders are serving an average sentence of 14.2 years.

Table 4.2. Five-year Comparison of Average Sentence Length (in years) of Incarcerated Offenders, FY2014 Compared with the FY2019

Offense Group	FY2014			FY2019			Percent Change

Total	31,889	100.0%	28,172	100.0%

*Nonviolent Offenses include all offenses not considered Violent or Sex Offenses

Disparities in Race/Ethnicity and Gender Composition

While overall the incarcerated population decreases 12% from FY2014 to FY2019, the percent change, by subgroups, varies widely dependent on race/ethnicity and gender (Table 4.4). While a very small portion of the population, Hispanic female incarceration increases the most at 35% during the five-year period; white females show the second largest increase at 6%. Overall, the white incarcerated population increases 7% while the black incarcerated population decreases 9%.

Table 4.4. Five-year Comparison of Incarcerated Population by Race/Ethnicity, FY2014 to FY2019

Race/Ethnicity	FY2014			FY2019			Percent Change

5. Admissions to Prisons

Several metrics are used to calculate admittance to an adult institution. “Admissions” is calculated by how many times the event occurs. It refers to all offenders admitted to prison; if an offender returns multiple times within the fiscal year he/she are counted each time as another admittance. Meanwhile, “number of offenders” refers to only the number of persons admitted to prison, some of which may leave and return but all are only counted once. As a result, the number of “admissions” will always be greater than or equal to the “number of offenders” when calculating admittance. Neither admission figures nor number of offenders admitted include offenders returned to a Community Release Center (CRC).

The term “new admissions” refers to the first admission of an offender for his/her sentence. “Return from supervision” is an offender’s subsequent return(s) to incarceration for the same sentence; another term use for this offender is a “violate.”

Admissions Type

Total admissions to Missouri prisons in FY2019 show a 11.6% decrease from the previous year. Both new admissions and return admissions show a decrease from the prior year, (Table 5.1 and Fig. 5.1). Table 5.2 includes these admissions broken down between new court commitments, probation revocations, and parole returns.

The comparison of FY2009-14 data with FY2014-1 shows a slight slowing in the decline in all admission to incarceration. However, new admissions are decreasing more than earlier years with the exception of 120-day and long term drug programs. Returns from supervision show less fluctuation in recent years as compared to FY2009-14 data. (See Table 5.3.)

After a nearly 0.1% decrease in female admissions from FY2017 to FY2018, the number of all admissions shows an increase of 6% from FY2018 to FY2019; the increase in the number of new admissions is responsible for this increasing trend (Table 5.4). Female admissions to prisons show a cumulative annual increase at 5.3% in the last five years compared with an average annual 0.5% increase from FY2009-14 (Table 5.5).

New Admissions by Offense Group

Since 2010, new admissions range from a low of 9,476 in FY2013 to a high of 10,334 in FY2016. From the prior year, new admissions show an increase of 2% in FY2019. Nonviolent offenses declined from 2010 until 2014 when increased to its peak in FY2016; however, they remain the largest offense group at 37%. New admissions for DWI offenses continue to decline, dropping 7% in FY2019. An increase in drug offenses in FY2019 halts the continual gradual rise which occurs during FY2013-16 (Table 5.8 and Figure 5.4).

Table 5.8. New Admissions by Offense Group from FY2010 to FY2019

Figure 5.4. Ten-year Trends in All New Admissions by Offense Group from FY2010 to FY2019

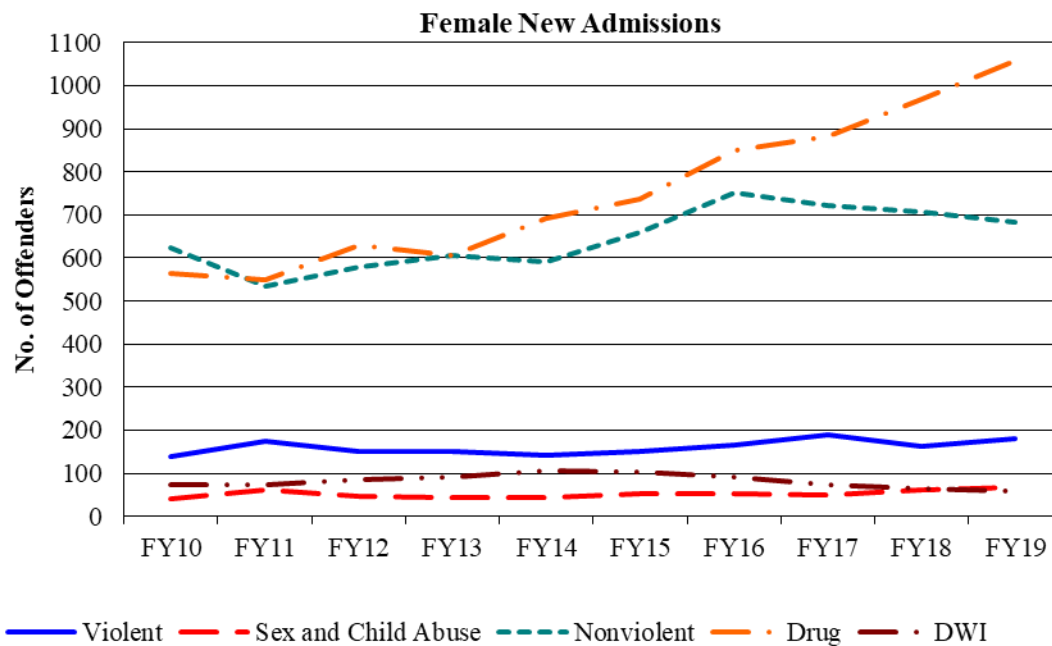

In FY2019, new female admissions to an institutional facility decrease by 13.6% from the prior year, but total new female admissions show an increase of 12.9% from 10 years ago. Admissions of all offense groups are stable or declining. Violent offenses had the greatest percentage decline at 20% (Table 5.9 and Fig. 5.5).

Offenders Admitted in FY2019

The largest number of admissions during FY2019 is technical violation returns for non-violent offenses (Table 5.11). Nonviolent offenses account for the greatest number of admissions among all offenders. Drug and DWI offenses show greater percentage of admissions to 120-day and long term (LT) drug programs than new admissions; this reflects the purpose of these programs. All offense groups show a similar trend: technical violations returns exceed those for law violation returns (Fig 5.7).

Table 5.11. Number of Offenders Admitted in FY2019 by Offense Group and Admission Type

Offense Group	New Admitted		Returned from		Number of Offenders	Percent of All Admitted
	New Prison Sentences	120 Day & LT Drug Programs	Law Violations	Technical Violations		
Violent	1,068	467	445	563	2,543	15.9%
Sex and Child Abuse	475	142	55	129	801	5.0%
Nonviolent	1,663	1,135	1,277	1,845	5,920	37.1%
Drug	1,481	1,557	1,221	1,862	6,121	38.4%
DWI	140	227	68	131	566	3.5%
Total	4,827	3,528	3,066	4,530	15,951	100.0%

Figure 5.7. Number of Offenders Admitted in FY2019 by Offense Group and Admission Type

Among all females admitted in FY2019, drug and nonviolent offenses account for 88% of admissions. Fifty-five percent of all females admissions are admitted to prison for drug offenses; among new admissions, 56% are sentenced to 120-day or long-term drug programs (Table 5.12). All offense groups show a similar trend where returns for technical violations exceed those for law violations (Fig 5.8).

Table 5.12. Number of Female Offenders Admitted in FY2019 by Offense Group and Admission Type

Offense Group	New Admissions		Returns from Supervision		Number of Offenders	Percent of All Admitted
	New Prison Sentences	120 Day & LT Drug Programs	Law Violations	Technical Violations		
Violent	85	60	17	57	219	7.3%
Sex and Child Abuse	27	32	2	13	74	2.5%
Nonviolent	250	276	151	303	980	32.7%
Drug	385	529	205	536	1,655	55.3%
DWI	13	32	5	15	65	2.2%
Total	760	929	380	924	2,993	100.0%

Figure 5.8. Number of Female Offenders Admitted in FY2019 by Offense Group and Admission Type

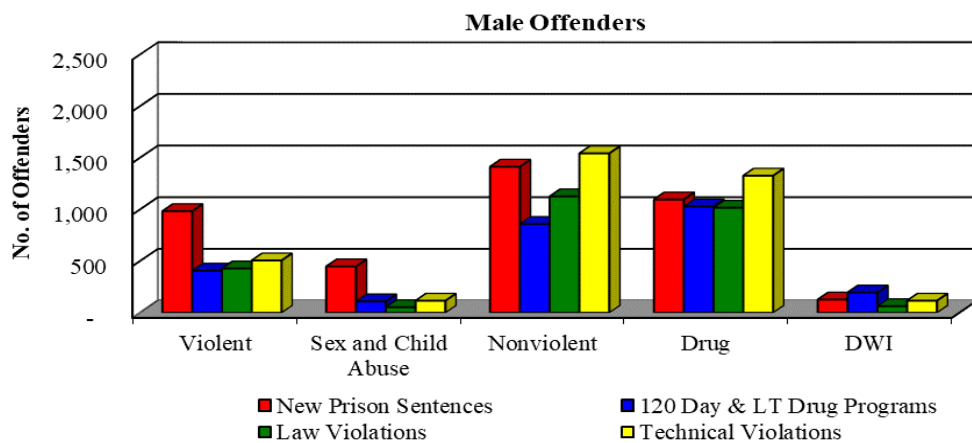

Nonviolent offenses accounted for 38% of all male admissions in FY2019; returns for technical violations is the major mechanism of admittance for this offense group (Table 5.13). Offenders charged with sex/child abuse or DWI offenses are least likely to return to incarceration from supervision (23% and 36%, respectively). Persons with nonviolent or drug offenses are most likely to return to prison from supervision (54%). In all offense groups, a technical violation is more common than a law violation as a reason for returns from supervision (Fig. 5.9).

Table 5.13. Number of Male Offenders Admitted in FY2019 by Offense Group and Admission Type

Offense Group	New Admissions		Returns from Supervision		Number of Offenders	Percent of All Admitted
	New Prison Sentences	120 Day & LT Drug Programs	Law Violations	Technical Violations		
Violent	983	407	428	506	2,324	17.9%
Sex and Child Abuse	448	110	53	116	727	5.6%
Nonviolent	1,413	859	1,126	1,542	4,940	38.1%
Drug	1,096	1,028	1,016	1,326	4,466	34.5%
DWI	127	195	63	116	501	3.9%
Total	4,067	2,599	2,686	3,606	12,958	100.0%

Admissions Demographics

Table 5.21 shows the number of admissions by admission type, race/ethnicity, and gender. Some offenders may have multiple admissions within the fiscal year. Admission types vary by gender and race/ethnicity. White male offenders are nearly equally likely to be admitted with new prison sentence as to 120-day and long-term treatment (LT) admissions; black male offenders are twice as likely to be admitted with a new prison sentence as to 120-day and LT. For both black female and white female offenders, the largest admission group is 120-day and LT (Table 5.21).

Table 5.21. Number of Offenders by Admission Type and by Race/Ethnicity and Gender in FY2019

For all offender admissions from FY2010 to FY2019, sixteen percent are assessed as being mentally ill as determined by assessment. Females exhibit a greater proportion of mentally ill individuals (30%) than males (14%) (Table 5.22). However, the proportion of male and female offenders needing clinical care or medication generally declines during the ten-year span.

Offenders admitted with medical concerns continue to be a smaller group than those with mental health concerns; on average in the last 10 years, 6% of all admissions need medical care. Medical concerns among female admissions are three times that of male admissions (Table 5.22). The percent of female admissions with medical concerns varies by year but generally declines over the past ten years. Medical needs among males remain stable within the 10-year span except for a noted drop in 2018.

Table 5.22. Offenders Admitted with Mental or Medical Health Concerns from FY2010 to FY2019

*Offenders require regular clinic care and psychotropic medication.

**Offenders require regular or daily nursing and schedule III medications.

Offenders assessed with moderate, intensive or severe substance abuse issues require drug treatment. Over the last 10 years, 85% of all offenders require drug treatment (Table 5.23). This percent remains relatively steady from FY2010 to FY2011, but has subsequently risen slightly. The percent requiring treatment reaches its highest level during the last two years at 89%.

* No substance abuse assessment completed

** No substance abuse indicated

†See Table 2.7 for treatment levels for assessment

††Offenders assessed as having moderate to severe substance abuse require treatment. Those with no assessment are excluded from the denominator.

Minimum Prison Term

Mandated in 1994, minimum prison terms (MPTs) establish the length of sentence required to be served before eligibility for parole for offenders convicted of dangerous felonies and for offenders with prior incarcerations with Missouri DOC (Section 558.019, RSMo). One prior incarceration requires an offender serve a minimum of 40% sentence length before parole; two prior incarcerations requires 50%; three or more prior incarcerations requires 80%; and dangerous felons serve at least 85% of their sentence. Offenders with drug offenses do not serve a minimum prison term for prior incarcerations with DOC.

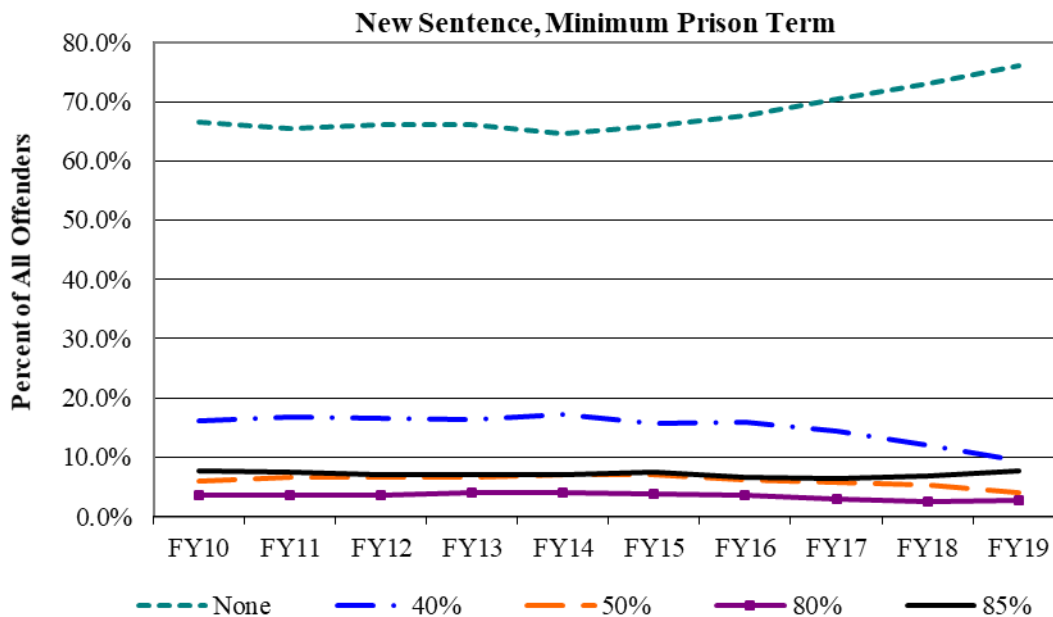

The number of admissions with MPTs peaks in FY2018. For the ten-year period since FY2010, a total of 8,801 MPTs are imposed which encompasses one-third of all offenders admitted with new sentences (Table 5.24). The greatest percent is for those serving 40% MPT, followed by 50%, and then 85% MPT (Fig. 5.10).

Table 5.24. New Admissions, FY2010 to FY2019 with Minimum Prison Terms (MPT) for Dangerous Felonies or Repeat Offenses

Figure 5.10. Ten-year Trends in New Sentence Admissions with Minimum Prison Terms

Average Sentence

Average sentences for new admissions include both new prison sentences (court commitments) and probation revocations. New admissions exclude offenders serving short sentences under 120-day and long-term drug sentences (559.115, RSMo or 217.202 RSMo). Life sentences are standardized at 30 years for the purpose of computing average sentence lengths.

New admissions since FY2010 are fairly evenly distributed each year between new court commitments and probation revocations. However, male admissions consistently include a greater number of new court commitments, while females incur more probation revocations (Table 5.25). Average sentence length in the past ten years is stable. In general, average sentences for males are roughly 1.5 years longer than females for new court commitments, and one year longer than females for probation revocations.

Table 5.25. Number of Offenders and Average Sentence (in years) for New Term Sentences by Gender from FY2009 to FY2018

Total	7.2	7.1	7.2	7.3	7.3	7.4	7.2	7.2	7.2	7.1

Table 5.26 promulgates data on new admissions by race/ethnicity. From FY2010 to FY2019, the amount of probation revocation admissions slightly surpasses new court commitments among white offenders. The reverse is true with black and Hispanic offenders

The average sentence lengths, for both new court commitments and probation revocation, are stable among black and white offenders within strata with one exception; probation revocations sentence length for blacks dropped by 0.1 year in 2019. Black offenders sentence length is longer than white offenders for both new court commitments and probation revocation (with the 2018 exception noted above). For FY2019, the sentence length for new court commitments is 0.5 years longer for black offenders compared to white offenders; probation revocation sentences for black and white offenders are 5.6 and 6.4 respectively. Other race/ethnicities sentence lengths fluctuate over time as would be expected with the smaller population size.

In looking at admissions and offense types over the last ten years, different patterns emerge. Since FY2010, probation revocations are consistently the greatest source of new admissions for nonviolent and drug offenses, while all other offense groups have greater admissions from new court commitments (Table 5.27). Among new court commitments, average sentence length is stable over the 10-year span except for drug offenses which show a declining length. Not surprisingly, the longest average sentence in all years is seen in the violent and sex/child abuse groups. Sentence length for sex/child abuse offenses exhibit the greatest fluctuation during the 10-year span.

Data in Table 5.28 show the average sentence length for the top ten most serious offenses by offense group for FY 2010 to FY2019. Sentence length for new court commitments remains stable for violent, nonviolent, and drug offenses. In 2019, sentencing length for forcible rape and statutory rape increase to their longest length during the ten-year span.

* The felony class of the most populous charge code.

The statutory defined offense may include more than one charge code.

Life Sentences and sentences over 30 years are computed at 30 years.

New court commitments include offenders sentenced by the courts to a term commitment. New court commitments do not include offenders sentenced to a 120 day, long term drug program, probation or parole revocations. Offenders convicted of the attempt of the offense are excluded (the offenders are sentenced to one felony class lower.)

The felony class is the current felony class for the offense. Some offenses, including Child Molestation 1st and Endangering the Welfare of a Child have had the felony class of the offense increased during the analysis period.

DWI (577.010) Includes persistent, aggravated and chronic offenses.

6. Releases from an Adult Institution

All Releases

Since the introduction of the new salient factor guideline assessment in 2004, the number of offenders released to parole has increased along with a reduction in the number of offenders released on the conditional mandatory release date or on the expiration of sentence.

Total releases from incarceration increase in FY2019 for the second fiscal year; this trend reflects increases to parole and probation, however there was a decrease in probation in FY2019 (Table 6.1). The comparison of FY2008-14 with FY2014-19 data displays a different picture; the rates for the last five years for all discharges types are relatively static unlike the former time span. See Table 6.2.

Table 6.1. Number of Releases from an Institution by Release Type, FY2008 to FY2019

Releases from Prison											
Type of Releases	FY2008	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019

Other*	0.7%	-3.1%
Discharge	-5.7%	-4.0%
Total Releases	0.4%	0.5%

*Other includes deaths, interstate transfers and absconders.

FY2019 reverses the six-year trend of increases in number of female offenders released. The drop in releases (-4.4 %) largely reflects the 14% decrease in parole releases. Parole, then probation, are the leading release types for female offenders (Table 6.3 and Fig.6.2). The comparison of FY2008-14 with FY2014-19 shows a slightly percentage change in conditional release types (Table 6.4).

Table 6.3. Number of Releases from the Female Prison Population by Release Type, FY2008 to FY2019

Table 6.4. Release Type, Average Percent Change for Females by Five-year Intervals

Change in Female Releases		
Type of Releases	Average of Annual Percent Increases	
	FY2008-FY2014	FY2014-FY2019
Probation	8.5%	1.7%
Parole	1.6%	2.8%
Conditional Release	3.7%	2.6%
Other*	3.7%	12.9%
Discharge	-6.0%	1.4%
Total Releases	3.5%	2.4%

*Other includes deaths, interstate transfers and absconders.

Unlike the female incarcerated population of FY2019, the male incarcerated population continues to experience a decrease in releases, 2.7 %; this reflects a 15% increase in parole releases (Table 6.5). In comparing FY2008-14 with FY2013-18 data, all types of releases remain relatively static as compared with ‘other’ release types (deaths, interstate transfers, and absconders) (Table 6.6).

Table 6.5. Number of Releases from the Male Prison Population by Release Type, FY2008-19

Male Releases

7. Time Served to First Release

All Releases

First release is defined as the first release following the admission for a new commitment. Offenders convicted of offenses committed on or after August 28, 1994 are required to serve a minimum prison term (MPT) before first release if they have committed a dangerous felony (85% of sentence) or have prior incarcerations with the Missouri Department of Corrections (40% of sentence for one prior, 50% for two priors, and 80% for three or more prior incarcerations). Time served includes jail time which is credited towards total incarceration time upon entrance to the Department of Corrections. Offenders, with a sex offense conviction under Chapter 566 RSMo, must complete the Missouri Sex Offender Program (MOSOP) before being eligible for a parole release. Offenders, with a chronic DWI sentence, must serve two years before parole eligibility per section 577.012.7(5), RSMo. First releases do not include the releases of offenders who are returned as parole violators or from a 120-day program.

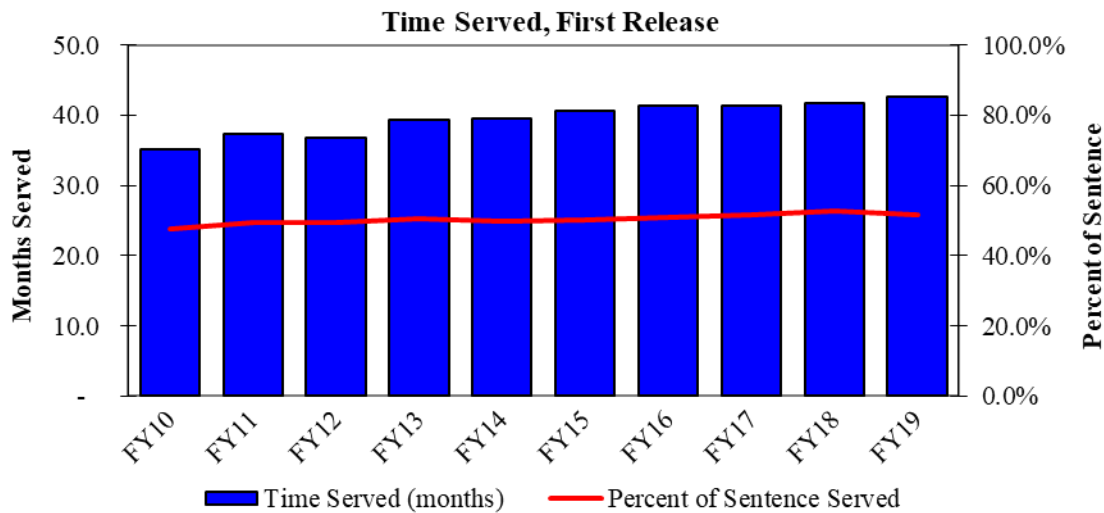

Average time served as a percent of the sentence in FY2019 is 52%, slightly less than time served in FY2018 (Table 7.1); the time served shows a gradual increase in the past ten years (Fig. 7.1). This is expected to continue, because of the imposition of MPTs, as time served increases with increasing aggregate sentence lengths.

Please note, the tables and figures in this chapter refer to time served to first release to parole or by conditional release or by discharge.

Table 7.1. Average Time Served, First Release to Parole or Conditional Release or Discharge, FY2010-19

	FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge

Figure 7.1. First Release, Trends in Time Served for All Offenders Released from FY2010 to FY2019

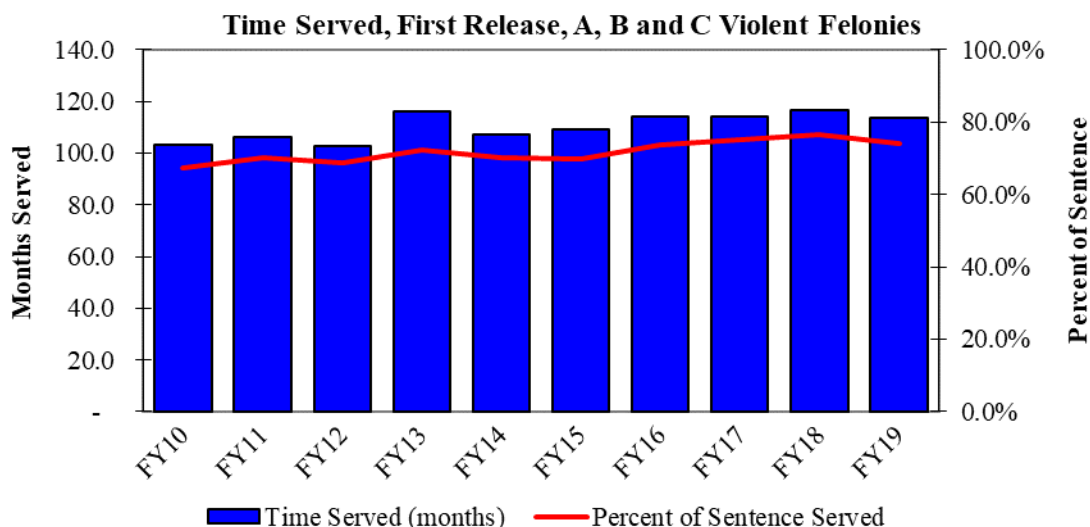

Offense Group and Felony Class Release

During the ten-year span FY2010-19, the longest average aggregate sentence (160.5 months) for class A, B and C Violent felonies occurs in FY2013 and the greatest actual time served (116.7 months) occurs in FY2018 (Table 7.2, Fig. 7.2). The percent of sentence served continues to rise during FY2015, 16, 17 and 18 with the highest occurring in FY2018 at 76% whereas in FY2019 this has decreased to 74%

Table 7.2. Time Served, First Release to Parole or Conditional Release or Discharge FY2010 to FY2019

FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge
FY2010	680	153.5	103.3	67.3%	71.2%	18.4%	10.4%
FY2011	673	151.3	106.4	70.3%	75.6%	15.0%	9.4%
FY2012	683	149.0	102.6	68.8%	76.4%	15.4%	8.2%
FY2013	703	160.5	116.0	72.3%	76.0%	15.8%	8.3%

FY2019	752	153.4	113.8	74.2%	82.7%	8.9%	8.4%

Figure 7.2. First Release, Trends in Time Served for Class A, B and C Violent Felonies FY2010 to FY2019

For class D and E violent felonies, not only are aggregate sentence length and time served less than class A, B and C felonies, but the percent of sentence served is lesser also (Table 7.3). All three measures (aggregate sentence, time served, and percent of time served) trend upward over the last ten years with these measures dropping from FY2017 to FY2019.

Table 7.3. Time Served to First Release to Parole or Conditional Release or Discharge for Class D and E Violent Felony Offenders Released FY2010 to FY2019

FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge
FY2010	441	60.3	29.4	48.7%	82.1%	16.1%	1.8%
FY2011	484	62.5	31.8	51.0%	81.0%	16.1%	2.9%
FY2012	470	62.1	31.9	51.3%	78.5%	18.1%	3.4%
FY2013	529	64.2	33.3	51.9%	80.5%	17.4%	2.1%
FY2014	496	62.6	31.5	50.4%	81.9%	14.9%	3.2%
FY2015	459	64.0	31.5	49.2%	81.7%	15.5%	2.8%
FY2016	433	66.6	34.1	51.2%	78.3%	18.7%	3.0%
FY2017	460	64.9	34.4	53.1%	75.2%	22.6%	2.2%
FY2018	480	64.5	34.2	53.0%	78.3%	19.6%	2.1%
FY2019	531	62.7	32.9	52.6%	81.7%	14.1%	4.1%

Figure 7.3. Trends in Time Served to First Release for Class D and E Violent Felony Offenders Released from FY2010 to FY2019

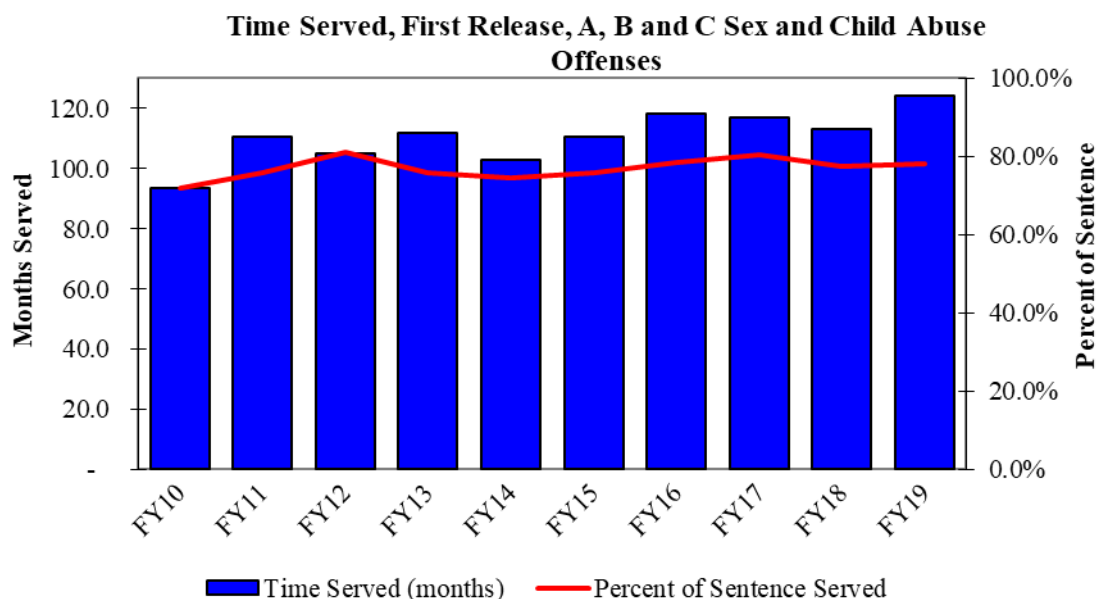

Over the last ten years, aggregate sentence length for class A, B and C sex/child abuse offenses are lesser than for class A, B and C violent offenses. The average percent of sentence served is greater for sex/child abuse offenses than violent offenses, thus making the average time served somewhat identical for both offense groups for class A, B and C felonies (Tables 7.2 and 7.4).

Table 7.4. Time Served, First Release to Parole or Conditional Release or Discharge for Class A, B and C Sex and Child Abuse Felony Offenders from FY2010 to FY2019

FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge
FY2010	213	130.2	93.7	72.0%	37.6%	27.2%	35.2%
FY2011	199	145.4	110.4	75.9%	37.7%	24.6%	37.7%
FY2012	224	129.9	105.2	81.0%	30.4%	27.7%	42.0%
FY2013	261	147.4	111.9	76.0%	27.2%	31.0%	41.8%
FY2014	289	138.0	102.8	74.5%	36.3%	34.6%	29.1%
FY2015	281	145.5	110.5	75.9%	36.7%	35.2%	28.1%
FY2016	259	150.6	118.1	78.5%	34.4%	29.7%	35.9%

FY2019	287	158.8	124.2	78.3%	35.5%	31.0%	33.4%

Figure 7.4. Trends in Time Served to First Release for Class A, B and C Sex and Child Abuse Felony Offenders Released FY2010 to FY2019

Data from FY2010 to FY2019 show the average aggregate sentence length for class D and E sex/child abuse offenses are longer than class D and E violent offenses; similarly, time served are also longer (Table 7.5). The average percent of sentence served is greater for class A, B and C sex/child abuse offenses than for class D and E violent offenses during the ten-year span.

Table 7.5. Time Served, First Release to Parole or Conditional Release or Discharge for Class D and E Sex and Child Abuse Felony Offenders Released FY2010-19

Time Served, First Release, D, and E Sex and Child Abuse Offenses							
FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge
FY2010	231	64.6	44.7	69.2%	39.4%	32.0%	28.6%
FY2011	250	67.0	47.0	70.2%	39.2%	27.6%	33.2%
FY2012	247	62.9	46.0	73.1%	32.4%	35.6%	32.0%
FY2013	230	65.5	46.5	70.9%	37.0%	37.4%	25.7%
FY2014	243	68.7	49.5	72.0%	39.1%	30.9%	30.0%
FY2015	235	67.2	44.4	66.0%	45.5%	33.2%	21.3%
FY2016	181	69.6	47.0	67.5%	42.5%	37.0%	20.4%
FY2017	178	69.0	49.1	71.2%	38.2%	36.0%	25.8%
FY2018	171	70.5	48.0	68.1%	42.7%	36.3%	21.1%
FY2019	183	75.8	48.1	63.5%	51.4%	32.2%	16.4%

Figure 7.5. Trends in Time Served to First Release for Class C, D and E Sex and Child Abuse Felony Offenders Released FY2010 to FY2019

Table 7.6 and Figure 7.6 display a ten-year span of data on nonviolent, drug and DWI offenses. Average aggregate sentence for class A, B and C nonviolent and drug offenses from FY2010 to FY2019 are nearly twice the length of class D and E nonviolent and drug offenses for time served, the average is slightly more than double. By contrast in DWI offenses, average percent of time served surpasses that in all felony classes for nonviolent and drug offenses during the ten-year span. See Table 7.6. Time served and percent of sentence served remains relatively consistent among all felony classes for nonviolent and drug offenses from FY2010 to FY2019. For DWI offenses, time served and percent of time served is lowest in FY2010 and steadily increases over the next nine years (Fig. 7.6).

For all offenders released in FY2019, sex/child abuse offenses result in the greatest time served and the largest percent of time served (Table 7.7). Among offense groups, the greatest number of releases occurs in the nonviolent group. The drug offense group exhibits the least time served (21.4 months) and the lowest percent of sentenced served (30%) (Table 7.7 and Fig 7.7).

8. Recidivism Rates of Institutional Releases

There are many ways to measure recidivism; currently, no national standard exists. The calculated rates in this Offender Profile are for offenders' first release in the commitment. These are offenders admitted to prison to serve a new commitment and are released to either parole, conditional release or on the discharge of the sentence. Excluded from the calculation is the release of parole violators who have previously been returned to prison for a violation of supervision within the commitment. Recidivism rates that include the release of parole violators are higher than the first release recidivism rates.

Recidivism is a cumulative measure which increases as time from release increases. The recidivism rates measure two outcomes:

1. The first return to prison following the release (technical violation of supervision or new conviction)
2. The first new conviction following the release from prison (The new conviction can be a new prison sentence or probation.)

Because many offenders returned from parole are retained for a technical violation, the new conviction recidivism rate is not a very helpful indicator of new criminal behavior until two or more years from release.

New convictions include findings of guilt (suspended impositions) and deferred sentences (drug courts, DWI courts and mental health courts) that are supervised by the Board of Probation and Parole. The data for the calculation of the rates are taken from the DOC offender database. Offenses and incarcerations in other states will not be included unless the offender is returned to the custody of the DOC. Other recidivism rates are given in the Offender Supervision profile for offenders released to probation following a 120-day or long-term drug program and for offenders serving a new court probation (Section 17).

Trends

Average recidivism rates, for the FY2010-19 time span, show a steady increase from six months to five year for new conviction recidivism; first returns show a lessening rate of increase after two years (Fig. 8.1).

When reviewing Table 8.1, first returns to prison data showing recidivism rates over the past 10 years, no discernible trends are evident. The most recent rates are lower as data entry lags behind. When comparing FY1997-2006 recidivism rate in first returns to prison data with the current 10-year span, a marked decrease in average recidivism rates is shown to have occurred during all time intervals (6-months, 16% vs 8%; 1-yr., 28% vs 20%; 2-yrs., 41% vs 35%; 3 yrs., 47% vs 41%; and 5 yrs., 52% vs 46; respectively). Recidivism rates for first new conviction are stable (FY2010-19) except for the 5-year rate.

Table 8.1. Recidivism Rates for All Offenders, First Return to Prison and First New Conviction, FY2010 to FY2019

Figure 8.1. Total Ten-year Recidivism for All Offenders on First Release to First Return to Prison and First New Conviction, FY2010 to FY2019

Gender

Female offenders have lower rates of recidivism for both first return to prison and first new convictions when compared with males (Tables 8.2 and 8.3); this is true across all time intervals. However, the female recidivism rates at 1, 2 and 3-years incrementally increase since FY2010 for first return to prison; increasing rates with new convictions occur at 1, 2, 3, and 5-years.

Male five-year recidivism rates averages, for first returns and new convictions, are close to 7 percentage points greater than females during last 10-year time span (Tables 8.2 and 8.3). Both measures of male recidivism show no apparent trends during FY2010-19. As with female recidivism rates, male new conviction recidivism rate increases steadily from six month to five years while first returns show a slower rate of increase after two years (Fig. 8.3).

Figure 8.3. Total Ten-year Recidivism for Male Offenders on First Release to First Return to Institution and First New Conviction, FY2010 to FY2019

Offense Group

In examination of first released from FY2010 to FY2019, recidivism rate for first returns to prison is lowest for DWI offenders throughout all time intervals (Fig. 8.4). Sex and child abuse offenders have the second lowest recidivism rates for first return to incarceration. Nonviolent offenders exhibit the highest rates of first return recidivism in all time periods.

Figure 8.4. Percent of First Returns to Prison for All Offenders with First Release from an Institution between FY2010 and FY2019 by Offense Group

For first new convictions after first release, nonviolent offenders retain the highest recidivism rates in all time intervals. Recidivism in this group reaches 34.7% within five years for releases between FY2010 and FY2019. The percent of new convictions for sex/child abuse offenders is at the lowest in all time periods. Unlike first return recidivism, first new conviction recidivism is greater for DWI than for sex/child abuse offenders (Fig. 8.5).

Figure 8.5. Percent of First New Convictions for All Offenders with First Release from Prison between FY2010 and FY2019 by Offense Group

9. Sex and Child Abuse Offender Population

The sex offender population comprises offenders with conviction of an offense under Chapter 566 (Sexual Offenses), failure to comply with the sex offender registration laws under Chapter 589 (Crime Prevention), or conviction of a child abuse offense under Chapter 568 (Offenses Against the Family) in the Missouri Revised Statutes. Failure to complete the Missouri Sex Offender Program (MOSOP) requires offenders to serve the remainder of their sentence.

Demographics

The FY2019 sex/child abuse population comprises 4,861 persons--seventeen percent of the total incarcerated population. Males comprise the vast majority of offenders (97%). White offenders constitute 70% of males and 86% of females among this offense group (Table 9.1). These figures are stable from the previous fiscal year. Seventy-one percent of male offenders in this offense group are currently between age 30 and 59 years of age, evenly distributed among the five-year age groups within that range. Female offenders tend to be younger with 69% between ages of 25 to 39 years (Table 9.2).

Sex Offender Classification

Assessments are conducted to classify an offender's health needs and skill levels. Some offenders may be 'unclassified' which includes recently admitted offenders who have not completed the classification process and offenders sentenced to 120-day programs. Statutory law requires offenders admitted under a 120-day program to be released within 120 days of admission if they successfully complete the program. Therefore, 120-day offenders do not receive a full classification upon admission due to the expected short prison stay.

As of June 30, 2019, seventy-three percent of sex offenders report a HSD/HSE education level with 77% of offenders classified as being at least semi-skilled; these percentages are higher than for all incarcerated offenders (Tables 9.3). A greater percent of females than males are classified as possessing the highest level of vocational readiness (28% vs 19%, respectively). Yet, a larger percent of women are 'unskilled' or have 'no skills or training' compared to men (31% vs 23%, respectively). A higher percent of incarcerated sex/child abuse offenders than the general institutional population have none or mild mental health problems (81% vs 58%, respectively) (Tables 2.5 and 9.3). A greater percent of males than females are classified as having 'no mental health problems.' The percentage of females needing clinic care or medication is double the percent of males (Table 9.3).

Sex offenders can be housed no lower than C-2 custody level until they have completed MOSOP. Thus, it is not surprising that over 90% of sex/child abuse offenders are classified as C-2 and C-3. A large disparity exists between male and female offenders--93% of male offenders are Level II or III custody while these custody levels contain only 65% of the female sex/child abuse offenders (Table 9.4).

*Percent excludes unclassified offenders

Overall, substance abuse among the sex/child abuse offenders is lower than in the general population (89% vs 70%, respectively) (Tables 2.7 and 9.5). Short-term treatment is the most common interventional need and accounts for 30% of males and 26% of females. (Table 9.5).

Comparison of the current year sex/child abuse offender population to that of FY2014 is only valid for large population groups; therefore, comparisons are limited to black, Hispanic, and white males and also white females. Data show no significant change among black and white males; Hispanic male offenders exhibit an increase of 10%. The white female offender population decreases 7% (Table 9.6); this follows a trend from the previous year--comparison of FY2014 to FY2019 data shows a 21% increase of sex/child abuse offenses among white females.

Admissions

Total admissions for sex/child abuse offenses in FY2019 show a decrease from the previous year but an 11% decline from ten years ago. Year-by-year differences in the percent of sex/child abuse offenses vary during the last 10 years (from -9.8% to 4.9%). New admissions continue to account for two-thirds of all admissions for these offenses which is higher than the general population rate of 50% (Tables 5.1 and 9.9). From FY2009-19, new prison sentences are the greatest source for admissions (Table 9.9). Five-year trends show stable to minimally decreasing population counts (Table 9.10).

Table 9.9. Sex and Child Abuse Offenses by Type of Admission to an Adult Institution, FY2009 to FY2019

Type of Admission	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019

Prior to July 1, 2008 admissions included offenders who were returned to a Community Release Center, but were not subsequently returned to prison.

After July 1, 2008 only offenders returning to prison are included as returns from supervision.

Releases

Sex and child abuse offender releases in FY2019 decrease by 8% from the prior year. The greatest number of releases each year is releases to parole, followed by discharges (Table 9.11). Releases to probation are for offenders stipulated by the court to the Sex Offender Assessment Unit and assessed as suitable for probation.

Time Served to First Release

Incarcerated offenders, convicted of a sex offense as defined in 589.015, RSMo, are required to complete the MOSOP before being eligible for parole. Failure to complete the program requires the offender to serve the complete sentence incarcerated.

The top twenty sex/child abuse offenses, based on number of releases, have an overall average time served to first release of 77.6 months, a decrease from the last two years (80.4 months in FY2017; 78.3 months in FY2018). Average percent of sentence served among the top twenty sex/child abuse offenses is 83% higher to percent served for class A, B and C violent offenses and all other sex/child abuse offenses (Tables 7.2 and Table 9.12).

Examination of the last ten years shows that since FY2012 the aggregate sentence length, overall, rises. FY2019 data contain the highest aggregate sentence length of 121.7 months (Table 9.13). The percent of time served remains fairly consistent with a range from 71-77% (Fig. 9.2). The largest release types in FY2019 are for parole, then conditional or administrative, and least for discharge (Table 9.13).

Table 9.13. Time Served and Percent of Sentence to First Release for Sex and Child Abuse Offenders by Release Type, FY2010 to FY2019

FY	Releases	Aggregate Sentence (months)	Time Served (months)	Percent of Sentence Served	Percent Released to Parole	Percent Released CR, Adm	Percent Released Discharge
FY2010	467	93.1	65.7	70.6%	40.3%	29.6%	30.2%

Figure 9.2. Trends in Time Served to First Release for Sex and Child Abuse Offenders Released from an Adult Institution, FY2010 to FY2019

Recidivism of Sex Offenders

Since FY2010, the percent of offenders returning to prison on a new conviction after completing MOSOP is less than those who failed or refused MOSOP (Table 9.14). Most sex offenders, who are convicted of a new offense, are convicted of a non-sex offense. Recidivism for new sex offense is very low (average of 1.6% at 5-years) (Table 9.15). Sex offender recidivism over ten years shows rates of new conviction rising more steeply between one and three years after release, with a greater and continuing rate of increase after three years (Fig. 9.4). This is in contrast to general offender recidivism where rates seem to level off significantly after two years. The ten-year trend for all sex offenders returning for new sex offense conviction is somewhat different in that the percent return rises steadily to the third year, then increases at a greater rate (Fig. 9.4).

10. Capital Punishment

Execution is an authorized punishment for offenders convicted of Murder 1st degree. Offenders not sentenced to death must serve life without parole. Although the new capital punishment law became effective in Missouri on May 26, 1977, the first execution in Missouri, following the US Supreme Court decision authorizing the legality of capital punishment statutes, took place in 1989. During the last 20 years (July 1, 2000 to June 30, 2019), fifty executions occurred; FY2019 saw no executions.

The statistics counts offenders with a conviction of Murder 1st degree for an offense committed after October 1984 or a conviction for capital murder prior to October 1984 as equivalent offenses. Prior to October 1984, Murder 1st degree allowed parole. Re-sentencing and commutation of the death penalty are not included in the charts.

Data from FY2019 show 23 offenders awaiting execution and 36 admitted with a sentences of life without parole. In FY2019, no offender enter incarceration with a death sentence. Death sentence admissions have decreased since first enactment of the law and remain between zero and three offenders per year since FY2001. The number of persons with life without parole admissions varies, ranging from 14 to 49 offenders per year during the last 20 years (Table 10.1).

Table 10.1. Sentence for Murder 1st Degree, Executions and Sentence Outcome, FY2000 to FY2019

Year	Awaiting Execution	Executed	Admissions to Prison			
			Life NP	Death	Total	Pct Death
FY2000	79	3	49	6	55	10.9%

FY2019	23	-	36	-	36	0.0%
TOTAL		50	654	30	684	4.4%

The twenty-year trend for Murder 1st degree sentences with life without parole shows a quadrennial decrease since 2001. Both sentences of life without parole and death decrease overall since FY2000 (Fig. 10.1). From FY2000 to FY2019, black offenders have received 52% of Murder 1st degree sentences; at the same time, black offenders receive a lower percentage of the death sentences than white offenders (30% and 70%, respectively) (Table 10.2).

11. Supervised Population

Probation and Parole statistics include Missouri field supervised offenders, interstate offenders, and offenders supervised in community release centers.

Demographics

The supervised population as of June 30, 2019 is slightly more than double the institutional population (61,338 vs 28,172, respectively) (Tables 11.1 and 2.1). The male supervised population is 1½ times larger than the institutional male population; the number of females on supervision are 5½ times greater than the incarcerated female population. This leads to a ratio of one female for every nine males in prison, but one female to every three males on supervision. Supervised black and white females are represented in percentages very similar to the respective percentages of the incarcerated population (Tables 2.1 and 11.1). For the supervised male population however, the percent of white males is higher and percent of black males is lower than in the incarcerated population. In comparing the parole and probation population, the percent of white females is similar for parole and probation. This is not true in comparing the male probationers and parolees. White males occur as a greater percentage of male probationers (73.9%) than male parolees (68.5%). For black males the reverse occurs with a lesser percent of probationers (23.4%) than parolees (29.7%) (Table 11.1).

Table 11.2 presents current age data on the offenders under field supervision. Both female and male parolees have a similar age distribution as the incarcerated population. (Tables 2.2 and 11.2). The distribution of ages for the probation population is similar to the incarcerated population.

Supervision Assessment (Offender Need Scores)

During the first 120 days of field supervision, the offender is in the assessment period. At the end of that period, the supervision level depends on the field risk reduction instrument completed by the probation and parole officers. This assessment is based on the offender's prior history and current interaction with the community and is derived from the Need Score results. The Need Score is a risk and needs assessment also completed by the supervising probation and parole officer and contains component scores for law (new offenses), technical violations, social, employment and substance abuse. The social score measures all family, medical, mental health and financial issues.

For offenders on regular supervision, the assessment is updated every 60 days. The assessment determines the level of supervision and the need for community programming and supervision strategies. The scoring of the components of the last needs assessment on or before June 30, 2019 is shown by the level of supervision. Offenders in community release centers are not included in the Need Score assessment. In addition, a substance abuse classification and assessment (SACA) is also conducted since its introduction by the Department in 2003. Most SACA assessments are completed on admission to prison and at the start of field supervision (probation or parole).

Law scores are based on new arrests. The majority of parolees and probationers (79%) have no arrests within three months prior to assessment. Technical scores are based on technical violations of probation or parole conditions; fewer offenders have no violations in the previous six months (55%) (Table 11.4). No gender differences are noted in law or technical scores. Approximately two-thirds of both males and females have social issues requiring intervention. This percentage is similar for parolees and probationers.

Employment score among the field population varies by gender and supervision group. Among parolees, roughly half of females and 60% of males have some type of employment for the previous three months. The percentage is greater for probationers with approximately 60% of females and two-thirds of males are employed in some capacity (Table 11.4).

The percent of parolees and probationers exhibiting no substance abuse for six months prior is similar (approximately 2/3 of those on field supervision). In drug/alcohol usage, no observable differences exist between probationers and parolees (Table 11.4).

SACA scores differ between parolees and probationers. Parolees need more treatment than probationers. The most common classification is "significant" substance abuse (requiring 6-month treatment), 19,252 individuals; this is closely followed by a score of "moderate" requiring short term treatment, 18,277 persons (Table 11.5). Regardless of supervision type, females need 6-month drug treatment more than males while more males than female require short term treatment. Among parolees, fewer females are without substance abuse issues than males. In the case of probationers, a slightly greater percent of females than males are classified as having no substance abuse.

Offense Groups

Among both parolees and probationers in FY2019, the greatest percent of male offenders are supervised for nonviolent offenses and female offenders for drug offenses. For parolees, violent and sex/child abuse offenses compose a larger percent than among probationers (Table 12.4). This is not surprising due to the nature of the offenses and associated penalties. The percentage of probationer supervised for DWI offenses is 1½ greater than among parolees. Again, this is as expected; DWI offenders may also be sentenced to 120-day or long-term treatment programs rather than prison sentences. Average probation terms are similar for males and females, but among parolees males tend to have noticeably longer term lengths than females for violent, sex/child abuse, and drug offenses (Table 12.5)

Table 12.4. Supervised Offenders in Each Offense Group on June 30, 2019

DWI includes BAC (excessive blood alcohol content) offenses. Nonviolent offenses are other offenses, including property offenses, public order offenses, other weapons offenses and other traffic offenses.

Top Twenty Offenses

Among all subgroups of probationers, the twenty most populous offenses make up 69-79% of all probation offenses (Tables 12.7 – 12.10). Among parolees, the top twenty offenses comprise a range (61-74%). The top offense for parolees and probationers is felony possession of a controlled substance (195.202 or 579.015, RSMo) (Tables 12.6), while the top one for incarcerated population is felony robbery 1st degree (569.020, RSMo) (Table 3.9).

13 Comparison with Supervised Population of June 30, 2014

Offense Groups

In the past five years, overall parole population increases 7% and the number of female parolees rises 28.9% and becomes a larger percent of the parolee population (15% of the population in FY2014 vs 18% in FY2019) (Table 13.1). Among the five offense groups, DWI experiences the greatest decrease in offenders (females -40.5%; males, -28.3%). For female parolees drug offenses and sex and child abuse offenses show marked increase from FY2014 to FY2019. The relative percentage of males remain unchanged from 2014 to 2019 in violent and nonviolent offense group. (Fig. 13.1). Among female parolees, drug convictions are an increasing relative percent of offenses in FY2019, surpassing the predominance nonviolent offenses in FY2014.

Table 13.1. Male and Female Parole Supervised Offenders by Offense Group and Percent Change, FY2014 to the FY2019

Figure 13.1. Percent of Offenses by Offense Group, All Parolees, June 30th, 2014 and 2019

Similar to the parolee population, over the last five years, the number of probationers has decreased (10% drop); however, the decrease only occurred in male (14% drop) and the female population has increased by 1.4% (Table 13.2). Both genders show decrease counts in sex and child abuse, nonviolent and DWI offense types. DWI offenses drop the most (65%). The relative percentage of male and female probationers with violent and drug offenses group increases while the relative percentage of sex and child abuse, nonviolent, and DWI offense decreases when comparing FY2014 to FY2019 data (Fig. 13.2)

Table 13.2. Male and Female Probation Offenders by Offense Group, FY2014 to the FY2019

Figure 13.2. Percent of Offenses by Offense Group, All Probationers, June 30th, 2014 and 2019

Average Sentence

Average sentence length of offenders on parole decreases slightly from FY2014 for both genders (Table 13.3). Only DWI sentence length changes notably with an average increase of 17.4% from FY2014 (See Table 13.3). Average sentence lengths for male parolees are markedly longer than females in the following offense groups: violent, sex/child abuse and drug offenses (both in FY2014 and FY2019) (Table 13.3).

Figure 13.3. Parolees: Average Term Length by Offense Group and Gender, FY2013 and FY2018

Average probation term lengths are comparable between males and females and relatively unchanged from FY2014 to FY2019 (Table 13.4 and Fig. 13.4). The average probation term is 4.6 years for both male and females in FY2019.

Table 13.4. Five-year Comparison of Average Probation Term (yrs) by Offense Group and Gender, FY2014 and FY2019

Figure 13.4. Probationers: Average Term Length by Offense Group and Gender, FY2014 and FY2019

Violent and Nonviolent Compositions

In comparing FY2014 data to FY2019, the percentage of parolees supervised for violent and sex offenses decreases for female and remain unchanged for male. (Fig. 13.5). However, for both genders, the majority of offenders are under supervision for a nonviolent offense.

For probationers, violent and sex offenses are less prominent, percentage-wise, than among parole offenders (Figs. 13.5 and 13.6). Comparing FY2014 data with FY 2019, female probationers slightly drop in the percent of violation of violent and sex offenses. Among male probationers, a slight uptick in the percent of violent and sex offenses is observable.

Racial Composition

The parole population decreases 7.5% from FY2014 to FY2019 (Table 13.1). The black male and female parole populations decrease the most (-14.7% and -18.9%, respectively). For race/ethnicity groups with a small population, interpreting changes is difficult.

From FY2014 to FY2019, probation population data display an even greater percent change, -10%. The Native American female probation population decreases the most by 27.3% (Table 13.5). As before, for race/ethnicity groups with small populations, interpreting data are difficult.

14. Supervision Openings

All Openings

Supervision openings show a slight increase, at 0.3%, in FY2019 from FY2018 data (Table 14.1). The decrease occurs across all opening types with the exception of 'Parole Release' and 'other.' Releases to parole contain the largest increase at 8% while new probation type is the largest in terms of absolute count (17,853). Overall, in the last 5-year time span, counts by opening types are relatively stable (Table 14.2).

Table 14.1. Supervision Opening Type from FY2009 to FY2019

Parole Releases	-1.3%	1.9%
Absconder Returns	6.4%	0.9%
Other	3.9%	0.4%

Openings by Gender and Race/Ethnicity

Total female supervision openings increase in FY2019 by 0.4%; this is at a slower pace than the previous year of 2.8% (Table 14.3). Increases occur in all supervision opening types with the exception of ‘New Probation’ and ‘120-Day Probation Release’ (Fig. 14.2). In comparing the annual average percent changes of FY2009-14 with FY2014-19, each type of supervision openings exhibits increase when comparing the former to the later, again with the exception of ‘New Probation’ and ‘120-Day Probation Release’.

The most common opening type in FY2019 among all race/ethnicity and gender groups is a new probation. Parole releases rank second for black males, white males, and white females. For black females, absconder returns ranks second.

15. Supervision Closings

All Closings

Since September 1, 2012, offenders on probation and parole are able to earn compliance credits (ECC) by maintaining good behavior, thereby reducing the time to completion of their sentence (HB1525). The result of ECC is a sharp increase in discharges during FY2013 and FY2014. The increase in discharge closing types continues (but less dramatic) from FY2015 through FY2019 (Fig. 15.1). The numbers of revocations/returns and interstate/other remain consistent over the past ten years (Fig. 15.1).

Table 15.1. Number of Closings from Field Supervision by Closing Type, FY2010-19

Figure 15.1. Ten-year Trends in Closings to Supervision by Closing Type from FY2010-19

Closings by Gender and Race/Ethnicity

The total number of closings in the female supervised population decreases from the previous year by 3% (Table 15.2). The number of female discharge closings are still above the pre-ECC level (Fig. 15.2). Examination of the ten-year span reveals a steady rise in female revocation/returns even though the female field population declines during the same period (Tables 1.3 and 15.2).

Figure 15.2. Ten-year Trends in Closings Types from Supervision among Females, FY2010-19

For males, the total number of closings supervised population decreases 4% from the previous year (Table 15.3). Discharge closing type remains above pre-ECC levels for males. Over the ten-year span, the numbers of revocations/returns and interstate closing types remain stable. The percent of discharged closings in each year hovers in the 37 to 44% range which is lower than the range for females.

Table 15.3. Ten-year Trends in Male Closings to Supervision by Closing Type from FY2010 to FY2019

16. Time under Supervision

Total and by Gender

In FY2019, probationers and parolees average around 17 months under supervision. Discharged offenders average two years and three months under supervision. (Table 16.1). Discharged females tend to serve slightly longer terms than males (Fig. 16.1). Revocation/return offenders average 11 months under field supervision before returning to incarceration (Table 16.1).

Table 16.1. Time under Supervision by Closing Type for FY2019

Supervision Closing Type	Female		Male		Total	
	Closings	Avg. Months Served	Closings	Avg. Months Served	Closings	Avg. Months Served
Discharges	4,114	26.9	12,466	26.0	16,580	26.2

TOTAL/AVERAGE	9,435	17.9	30,534	17.0	39,969	17.2

Figure 16.1. Time under Supervision by Closing Type in FY2019

Offense Group

Violent offenses include homicide, robbery, assault, kidnapping, arson 1st degree, armed criminal action and serious weapons offenses (felony class A and B). Sex offenses comprise 566, RSMo sex offenses and 568, RSMo child abuse offenses, excluding non-support. Drug offenses include those from Chapters 195 and 579, RSMo. The DWI designation entails BAC (excessive blood alcohol content) offenses. Nonviolent offenses are other offenses, including property offenses, public order offenses, other weapons offenses and other traffic offenses.

As with the institutional population, discharged sex/child abuse offenders serve the longest average time under supervision (Tables 3.4 and 16.2). Nonviolent, drug, and DWI offenders serve comparable lengths of time (Table 16.2). Females tend to serve a longer average time than males for nonviolent and drug offenses while, males have a longer average time served than females for sex/child abuse offenses (Fig. 16.2).

Table 16.2. Time under Supervision for All Discharged Field Supervised Offenders by Offense Group in FY2019

Offense Group	Female		Male		Total	
	Supervision Discharges	Avg. Months Served	Supervision Discharges	Avg. Months Served	Supervision Discharges	Avg. Months Served
Violent	352	27.5	2,048	28.9	2,400	28.7

DWI	172	27.4	1,061	28.6	1,233	28.5
TOTAL/AVERAGE	4,115	26.9	12,463	26.0	16,578	26.2

Figure 16.2 Time under Supervision for All Discharged Field Supervised Offender by Offense Group, FY2019

In looking at parolees only, supervised offenders serve an average time 4-5 months less than the average for the total field population (Tables 16.2 and 16.3). Persons with nonviolent offense serve the shortest time on average. Total average supervised time is comparable between females and males (Fig. 16.3).

Please note that since FY2013, legislation allows offenders to accrue Earned Credit Compliance (ECC). This change allows for eligible offenders with eligible offenses to take 30 days off their sentences for every 30 days that they are compliant on supervision. This reduces time on supervision for many offenders. Because certain violent crimes and sex/child abuse crimes are not eligible; these offense groups are largely unaffected by ECC.

Table 16.3. Time under Supervision for Parole Offenders Discharged by Offense Group, FY2019

Offense Group	Female		Male		Total	
	Supervision Discharges	Avg. Months Served	Supervision Discharges	Avg. Months Served	Supervision Discharges	Avg. Months Served
Violent	99	23.5	980	28.5	1,079	28.0

Figure 16.4. Average Months under Probation Supervision by Gender and Offense Group for All, Male and Female Probationers Discharged from Field Supervision in FY2019

17. Recidivism Rates of Selected Supervised Offenders

Recidivism rates in this section refer to new probationers and new 120-day and long-term drug program (120d/LT) offenders released to probation. See Recidivism Rates of Institutional Releases for explanation of recidivism terms (Section 8). For recidivism rate of 120d/LT program, only offenders with a new offense sentenced to a program and released to serve probation are used for calculations. This section excludes offenders serving probation and revoked to 120d/LT drug program sentence in its calculations.

Total Recidivism

In FY2013, five-year recidivism among 120d/LT offenders for either first return or first new conviction is 41.5%, slightly down from 41.7% for FY2010 releases (Table 17.1). Six-month recidivism is slightly lower in FY2019 than in the previous year but still above the ten-year average. Furthermore, latest one, two, and three-year recidivism rates are higher than the 10-year average.

Now let's look at recidivism rate of new probationers sentenced for a new offense. The time to the first incarceration or first new conviction is calculated from the start of supervision. Among all new probation offenders for either violation or new conviction, recidivism rates generally increase each year in all time intervals from FY2010 to FY2019 (Table 17.2). The only exception is the rate of first new convictions which has a stable rate. For first new convictions only, three-year recidivism rates is at its highest levels during the ten-year interval (16.1 %). All other recidivism periods exhibit minimal increases or remain constant.

Table 17.1. Recidivism for New 120-day and Long-term Drug Program Participants Released to Probation from FY2010 to FY2019 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence) and for New Conviction Only

FY2019	15,017	1.0	-	-	-	-
Average	15,184	1.4	4.6	10.6	15.6	22.7

For both 120d/LT offenders and new probation offenders, average recidivism for first return or new conviction is higher for males than females over the last ten years (Table 17.3). Recidivism is higher for 120d/LT offenders than new probation offenders in all periods except six-months. At six-months, new probation recidivism for females equals males. The 120d/LT male offenders have a greater recidivism rate than the other groups. All groups display a slowing of the rate of recidivism after two years.

Table 17.3. Ten-year recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2010 to FY2019 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence)

First Return for Violation or Incarceration for New Conviction						
Probation Type	Openings	Percent Incarcerated Within				
		6 Months	1 Year	2 Years	3 Years	5 Years
<i>120-Day and Long-Term Drug Releases to Probation</i>

<i>New Probation</i>						
Female	41,229	4.8	11.3	20.4	25.2	29.1
Male	110,612	4.8	12.2	23.2	29.5	34.8

Figure 17.1. Ten-year Recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2010 to FY2019 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence)

Now let's look at new convictions only for 120d/LT offenders and new probation offenders, FY2010-19. Similar recidivism rates occur in all subgroups at 6 months; at one year, the higher rate for males becomes apparent. After one year, male 120d/LT recidivism becomes notably higher than male new probation recidivism. See Fig. 17.2.

Table 17.4. Ten-year recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2010 to FY2019 on First New Conviction (New Prison or Probation Sentence)

**Ten-Year Recidivism for Supervised Offenders FY2010 to FY2019
First New Conviction**

Probation Type	Openings	Percent Incarcerated Within				
		6 Months	1 Year	2 Years	3 Years	5 Years
120-Day and Long-Term Drug Releases to Probation						
Female	2,406	1.1	4.0	10.4	15.0	20.5
Male	12,497	1.3	5.1	13.9	19.7	28.0
New Probation						
Female	41,229	1.2	3.7	8.6	12.6	18.2
Male	110,612	1.5	4.9	11.4	16.7	24.2

Figure 17.2. Ten-year Recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2009 to FY2018 on First New Conviction (New Prison or Probation Sentence)

Offense Group

Among new probations and 120d/LT released to probation from FY2010 to FY2019, recidivism for combined first returns and new conviction is lowest for DWI at all time periods (Fig 17.3). Violent and nonviolent offenses are similar in recidivism rates and carry the highest rates. Recidivism rates for drug and sex/child abuse offenders are similar and lower than violent and nonviolent offenses.

Figure 17.3. Recidivism Rates as Percent of First Returns and New Convictions for Supervised New Probation and 120-day/long-term Drug Program Offenders (includes offenders released from FY2010 to FY2019, and total number released by offense group)

In looking at first convictions only, nonviolent supervised offenders released from FY2010 to FY2019 display the highest rate of new conviction recidivism for all time periods (Fig. 17.4). This is similar to institutional new conviction recidivism (Fig 8.4). DWI offenders have the lowest recidivism for six months to three years. At year five, sex/child abuse offenders exhibit the lowest recidivism rate.

Figure 17.4. Recidivism Rates as Percent of New Convictions for Supervised New Probation and 120-day/long-term Drug Program Offenders (Includes offenders released from FY2010 to FY2019, and total number released by offense group.)
